ANTI-CORRUPTION COMMISSION

COMMISSION MEETING FORM

MEETING NO.	10th Commission Meeting
DATE:	09 January 2026
TIME:	02:00 PM
VENUE:	*Druk Dradhir Khang*

#	AGENDA & DISCUSSION	DECISION
1	Draft Justice Sector Digital Blueprint – PPD, DoI, and ICTS *The team led by the PPD presented the draft Justice Sector Digital Blueprint to the Commission for review and guidance on the way forward.* *The Blueprint assessment highlighted significant structural, technological, and governance gaps across the justice sector, notably:* - *A low integration maturity (score of 1 out of 5), with core justice sector systems operating in silos and no inter-agency API integration.* - *Security maturity at Level 2, falling short of the 13th FYP target of Level 4.* - *Predominantly manual processes, with only two out of six lifecycle stages partially digitized, and an estimated 42-month timeline for full transformation.* - *Fragmented technology landscape, including multiple development stacks (PHP, Java, Laravel), mixed database platforms, and dispersed hosting environments (on-premises and GDC).* - *Weak data governance, characterized by inconsistent case and person identifiers, lack of inter-agency data-sharing frameworks, absence of sector-wide standards or common data models, and only basic handling of Personally Identifiable Information (PII).* - *Inconsistent IP ownership and vendor engagement practices, increasing long-term technical and legal risks.* *In response, the Blueprint articulates a digital vision of "**a digitally integrated Justice Sector where cases flow seamlessly from investigation to adjudication, citizens have real-time visibility, and agencies collaborate***	**Endorsed the proposed way forward with following specific directives:** - **explore engagement with GCIT to undertake security testing and related follow-up actions within the ACC.** - **replace the term "*mature*" used in describing ACC systems with language reflecting that the systems are currently in use and in testing mode.** - **present the Blueprint to the GovTech Agency prior to its presentation to the JJSMC and NSC.** - **engage closely with the Wisdom Centre for Justice to seek blessings from HRH in relation to the initiative.** - **allow the justice sector to identify the lead agency for driving the implementation of the Blueprint.** - **explore the engagement of TOPPAN to support presentations of the Blueprint to the JJSMC and NSC, with the sector**

	***through shared data and standards**". To realize this vision, the Blueprint recommends:* - *Adoption of a Justice Data Exchange (J-DX) as the central integration backbone, serving as an API gateway, data transformation engine, asynchronous communication bus, and audit logger.* - *Hosting justice sector systems primarily in the GDC with clearly defined Service Level Agreements, while retaining a fallback option for a sector-owned private cloud where necessary.* - *Establishment of a data ownership and interface matrix to resolve inconsistencies in identifiers across the justice lifecycle.* - *Transition to a platform-centric, iterative delivery approach to accelerate outcomes, reduce long-term technical debt, and manage risk.* - *Strengthening of cybersecurity architecture, including separation of security tiers, enhanced connectivity, resilience planning, disaster recovery strategies, and testing and hardening standards.* - *Standardization on a Java-based development stack and implementation of role-based capacity development.* - *Institution of a sector-wide governance framework, comprising a Project Steering Committee, Project Working Committee, and Data Governance Committee, to oversee phased implementation.* *The team further proposed a three-tiered action items approach:* • ***At the ACC level**: development of API endpoints aligned with J-DX, strengthening cybersecurity, implementing business continuity and disaster recovery frameworks, enforcing testing standards, and aligning data classification with the Blueprint.* • ***At the Justice Sector level**: sectoral decisions on the adoption of J-DX and hosting models, alignment of governance structures with existing mechanisms, coordinated vendor engagement, policy reforms, and sector-wide capacity development.* • ***At the GovTech Agency level**: support for hosting, deployment, security, and connectivity architecture, and development of interoperable business systems.* *Towards this, the following next steps were proposed for implementation over the next six months:*	**bearing expenses related to local logistics.**

	- *Present the Justice Sector Digital Blueprint to the Joint Justice Sector Management Committee (JJSMC) and the National Steering Committee (NSC);* - *Formally launch the Blueprint and establish a Project Management Unit (PMU) with a dedicated Project Manager, potentially drawn from the ACC, given its institutional familiarity with the initiative;* - *Adopt the proposed governance framework by optimizing existing mechanisms, including the JJSMC and Justice Sector Working Committee (JSWC);* - *Develop a comprehensive project proposal and mobilize the required resources; and* - *Conduct targeted workshops on data ownership, interface matrix, and SRS convergence, alongside the progressive enhancement of agency-level business systems.*
